#### Lab Practical #05:

Study the concept of VLAN using packet tracer.

## **Practical Assignment #05:**

1. Implement the different network structures in VLAN and VLAN trunking. Also check connectivity between them using ping command or PDU utility.

# **Solution:**

#### Steps:

- 1. Open Packet Tracer.
- 2. Add 1 Switch + 4 PCs.
- 3. Assign IPs:
  - $\circ$  VLAN 10  $\rightarrow$  PC1: 192.168.10.1, PC2: 192.168.10.2
  - ∨ VLAN 20 → PC3: 192.168.20.1, PC4: 192.168.20.2
- 4. Go to Switch  $\rightarrow$  CLI  $\rightarrow$  Configure VLANs:

```
Switch> enable

Switch# configure terminal

Switch(config)# vlan 10

Switch(config-vlan)# name SALES

Switch(config-vlan)# exit

Switch(config)# vlan 20

Switch(config-vlan)# name HR

Switch(config-vlan)# exit
```

## 5. Assign VLANs to ports:

```
Switch(config)# interface fastEthernet 0/1
Switch(config-if)# switchport mode access
Switch(config-if)# switchport access vlan 10

Switch(config)# interface fastEthernet 0/2
Switch(config-if)# switchport mode access
Switch(config-if)# switchport access vlan 10

Switch(config)# interface fastEthernet 0/3
Switch(config-if)# switchport mode access
Switch(config-if)# switchport access vlan 20

Switch(config)# interface fastEthernet 0/4
Switch(config-if)# switchport mode access
Switch(config-if)# switchport mode access
Switch(config-if)# switchport access vlan 20
```

# 6. For VLAN trunking (between switches):

Switch(config)# interface fastEthernet 0/24 Switch(config-if)# switchport mode trunk

# 7. Test connectivity:

- PCs in the same VLAN can ping each other.
- PCs in **different VLANs cannot ping** unless a router-on-a-stick or Layer 3 switch is configured.
